Etymology Thesis

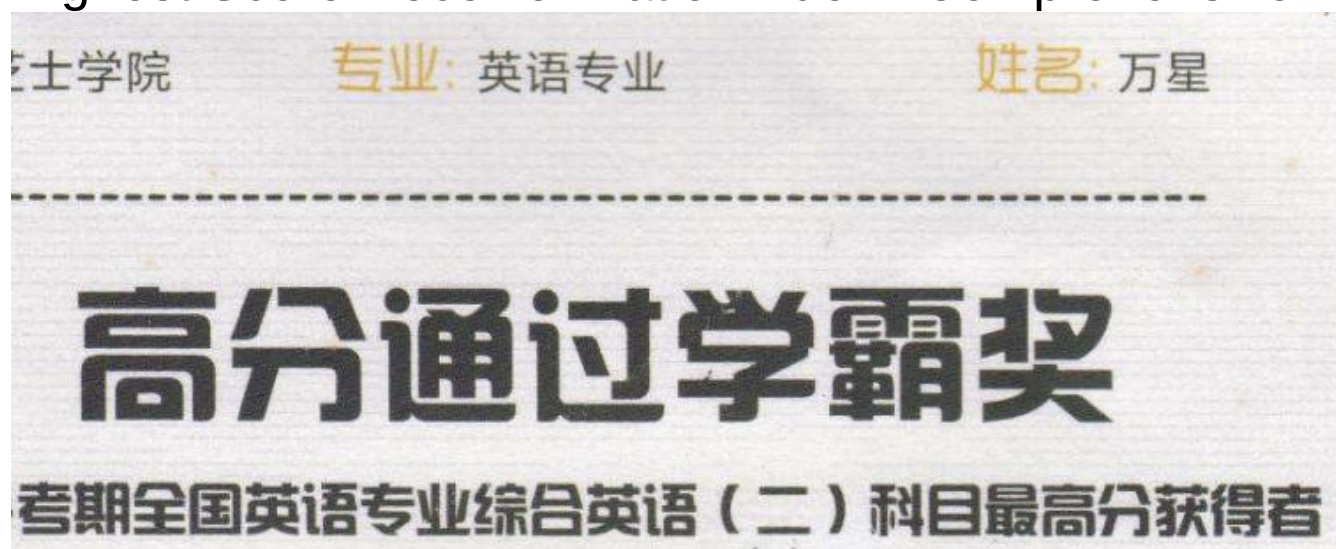

An Analysis of the Logic behind Diachronic Change in English Words.

Wan xing English

Abstract: This analysis aims to succinctly outline the benefits of incorporating etymology in vocabulary building and emphasize the reason behind semantic and morphological shifts diachronically. Since there have been pioneers pushing the word learning envelope further and further by utilizing root expansion methodology, this thesis might be supplementary to existing studies. As many have experienced the agony of memorizing a word's definition in isolation via monotonous repetition letter by letter and then the frustration of retrieving it's meaning in vain, this paper could make vocabulary building more bearable. In the course of analysis, dispersed comparison between Chinese character and English word creation is conducted to establish familiarity via connection. Moreover, delving into the fundamental causes that trigger the changes in forms makes reception more of a joy rather than a struggle. In addition, re-recognizing certain word's primal meaning and its evolvement through out time enables us to appreciate the interrelation among related words. Therefore, this analysis explains that there's logic behind those changes, avoiding intermittent in language study. To sum up, this paper will be meaningful in improving vocabulary.

Key words: Semantic, Form, Shift, Diachronic
